## Platinum Blonde HMI

Issued 2018

The Platinum Blonde is a 1200W HMI. We have developed it from tried and tested technology so you can rest assured this is a reliable and well-crafted luminaire with its own unique take on the HMI. We have utilized the polycarbonate housing of our 2KW tungsten blonde and fit it with a doubled ended 1200W HMI lamp which gives 750 hours of continuous use.

The result is a brilliantly lightweight and highly portable lamp with a high output, low cost daylight source with known colour characteristics but more importantly a great quality of light.

Controls on the lamp head are kept to a minimum for ease of use, and consist solely of a continuously rotating focus knob, with the on/off function being controlled from the 575-1200W Power Gems ballast. The ballast supports high speed work, up to 1000Hz operation. The ballast is wired with the standardized pin configuration.

The open faced format is ideal for any situation where raw output is the main requirement such as a bounce light or punching through diffusion.

As the Platinum Blonde is only 1200W it can be powered from virtually any domestic supply worldwide without the worry of it tripping, giving you the freedom to shoot wherever you need it. On outside location it only needs a small generator to run unlike some bigger HMI's.

Much like the standard blonde, the Platinum Blonde can be focused from 30-65°, to allow flexibility in use without the need for additional lenses. As with all Photon Beard lights, there is a secure accessories slot on the front of the lamp where you can fit barn doors that include gel clips.

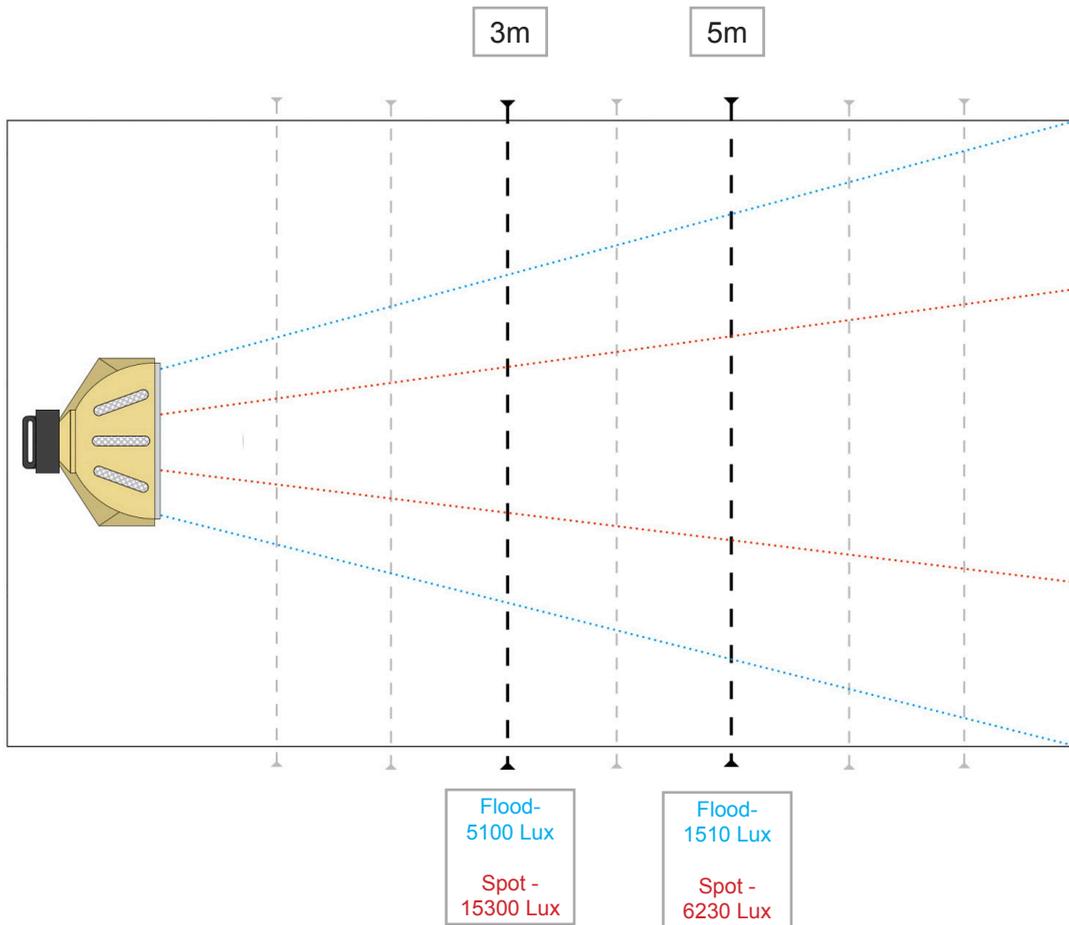

The Platinum, Blonde is available in two options. The head only is supplied with barn doors, head to ballast cable and 1.2kw HMI lamp. The complete system option adds a 575-1200W electronic Power Gems ballast. All Photon Beard lights come with a full 12 month manufacturer's worldwide warranty.
