

PHOTON BEARD HIGHLIGHT Radiant 170

Instructions for assembling reflector

Unpack Radiant 170 lamphead, and reflector (packed separately). The reflector package also contains 3 x M5 machine screw, 3 x washer, and 1 x spanner.

Use screws and washers to attach reflector to lamphead using spanner provided. The reflector should be positioned so that the screws are located at the far left-hand end of the mounting slot as shown. Screws should be tight enough to prevent accidental separation of the reflector from the lamphead while in use.
